

In the Claims:

1. – 12. (cancelled)

13. (currently amended) A pneumatic paintball marker adapter kit for use with a plurality of pneumatic paintball ~~marker comprising~~ markers, each marker including a marker body comprising with a back portion and a front portion, the back portion is being adapted to receive a paintball, the front portion is being adapted to detachably connect with a barrel to discharge a paintball through the barrel, ~~said barrel comprising a hollow elongated cylindrical tube comprising an interior diameter, a breech end and comprising a connection means at the breech end and adapted for connection with the front portion of the marker and a paintball discharge muzzle end,~~ and the plurality of markers having front portions of different sizes, the kit comprising:

- (a) a universal barrel comprising a hollow, elongated cylindrical tube comprising having an interior diameter, a paintball discharge muzzle end, a breech end and ~~comprising~~ a connection means at the breech end ~~and adapted for connection with the front portion of the marker and a paintball discharge muzzle end~~;
- (b) ~~one or more adapters comprising~~ a plurality of adapters, each adapter having a body with a hollow cylindrical tube, a marker end adapted for connection with the front portion of ~~the~~ a marker and a barrel connection adapted for detachable connection with a the breech end of the universal barrel adapted for detachable connection with said adapter, said body having an internal diameter equal to the internal diameter of the universal barrel;
- (c) the barrel connection of each adapter being the same size, for connection to the breech end of the universal barrel, and the marker end of each adapter being of a different size for connection to the plurality of makers having front portions of different sizes;
- (d) said universal barrel being substantially longer than said adapters;
- (e) (e) ~~one or more~~ a plurality of muzzle extensions of various lengths, each muzzle extension comprising a hollow cylindrical body, a discharge end to discharge said paintball and a muzzle end adapted for connection with the muzzle end of the universal barrel ~~for detachable~~

~~connection with said muzzles, wherein said one or more muzzle extension can be of various lengths; and~~

- (d) (f) ~~one or more~~ a plurality of removable tubular barrel sleeve inserts adapted to be inserted within the ~~adaptor,~~ adaptors and the universal barrel and to extend ~~the~~ an entire length of an assembly of ~~within the universal barrel,~~ the and an adaptor, said inserts ~~comprising~~ including a hollow elongated cylindrical tube with an inside diameter and an outside diameter, the outside diameter being slightly smaller than the internal diameter of the universal barrel~~[[,]]~~ and the adaptor to form a continuous path for the projection of a paintball discharged from the paintball marker.

~~wherein the marker end of each of the adaptors is adapted for connection to the breech end of the universal barrel and the muzzle extension is adapted for connection with the discharge muzzle end of the universal barrel and the insert is adapted to be inserted within the adaptor, the universal barrel, to form a continuous path for the projection of a paintball discharged from a paintball marker.~~

14. (cancelled)

15. (currently amended) The pneumatic kit of claim 13, wherein each ~~inserts~~ insert has an inside diameter from at least about 0.670 inches to at least about 0.695 inches.

16. (new) A pneumatic paintball marker adapter kit for use with a plurality of pneumatic paintball markers, each marker including a marker body with a back portion and a front portion, the back portion being adapted to receive a paintball, the front portion being adapted to detachably connect with a barrel to discharge a paintball through the barrel, and the plurality of markers having front portions of different sizes, the kit comprising:

- (a) a universal barrel comprising a hollow, elongated cylindrical tube having an interior diameter, a paintball discharge muzzle end, a breech end and a connection means at the breech end;
- (b) a plurality of adaptors, each adaptor having a body with a hollow cylindrical tube, a marker end adapted for connection with the front portion of a marker and a barrel connection adapted for detachable

connection with the breech end of the universal barrel, said body having an internal diameter equal to the internal diameter of the universal barrel;

- (c) the barrel connection of each adapter being the same size, for connection to the breech end of the universal barrel, and the marker end of each adapter being of a different size for connection to the plurality of makers having front portions of different sizes;
- (d) said universal barrel being substantially longer than said adapters; and
- (e) a plurality of removable tubular barrel sleeve inserts adapted to be inserted within the adaptors and the universal barrel and to extend an entire length of an assembly of the universal barrel and an adaptor, said inserts including a hollow elongated cylindrical tube with an inside diameter and an outside diameter, the outside diameter being slightly smaller than the internal diameter of the universal barrel and the adaptor to form a continuous path for the projection of a paintball discharged from the paintball marker.

17. (new) The pneumatic kit of claim 16, wherein each insert has an inside diameter from at least about 0.670 inches to at least about 0.695 inches.
